

ABSTRACT OF THE DISCLOSURE

A gardening scissor comprises a handle, a fixed jaw, a movable jaw, a linkage slab, and a module board. The fixed jaw and module board are constructed of two separating boards available in seam between them. The features are as follows: the seam is provided with a protective cover by the hood. The width of this hood is capable of proving cover on the seam, provided that the flexibility of fixed jaw and movable jaw is not hindered. The linkage side of hood is available with built-in edge, which is capable of inserting the inwall between two boards. Besides, the built-in edge and the inwall between two boards are provided with bulge strip and notch for positioning of hood. It is possible to prevent branches inserting the seam and enrich the appearance of gardening scissors to serve the purpose of an enhanced efficiency via a variety of colors and texture of hood.
